

Data Dashboard Design & Build on a Budget

Veronica Smith, Principal
AEA Coffee Break Webinar
February 23, 2012

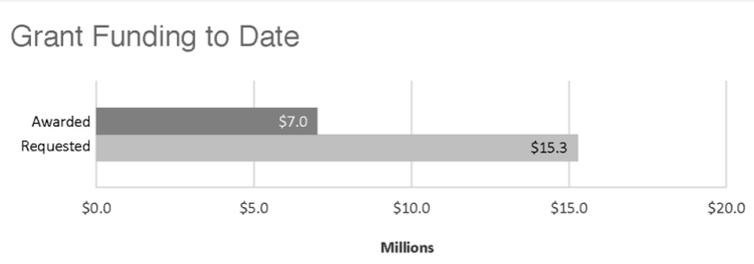

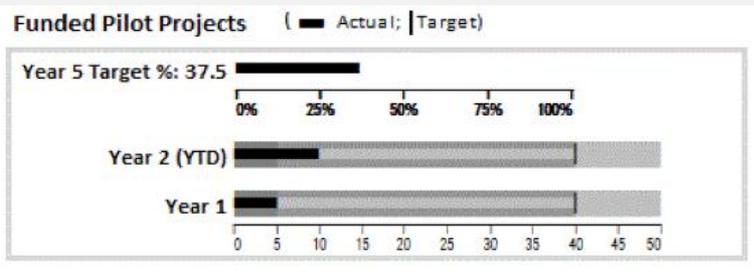

Data Dashboard Definition

Visual display of the most important information needed to achieve one or more objectives consolidated on a single screen (or page) so it can be monitored and understood at a glance.

Evaluation & Monitoring Process

Design Measures

measure design

begin with the end in mind	<ul style="list-style-type: none"> • Increase DADS clients' parenting skills and child development knowledge
be sensory specific	<ul style="list-style-type: none"> • Client is using the skills taught in the parenting course • Children, mentors, spouses and partners observe client using parenting skills • Client demonstrate higher level of child development knowledge on pre-test post-test taken at parenting course • Client demonstrates sustained level of child development knowledge at 6 months and a year after taking the parenting course • Client creates and implements parenting plan

find potential measures	<i>potential measures</i>	<i>Strength</i>	<i>Feasible</i>
	1. Change in child development knowledge test performance after completion of parenting skills course	H	H
	2. Reports of client using key parenting skills at 3, 6 and 12 months after attending course	H	L?
	3. Child development knowledge test at 6 and 12 months after attending course	H	M
	4. Parenting skills client survey at 6 and 12 months after attending course	M	M
	5. Parenting plan completion record	M	H
	6. Parenting plan implementation review at 6 and 12 months	H	M
	7.		
check the bigger picture	<ul style="list-style-type: none"> • If clients feel like they are being judged, they may avoid coming to DADS to avoid taking the follow up test and survey. We will want to emphasize that this information is being gathered to help clients AND DADS to learn and grow. • We will need to look into how we can get observations from children, spouses 		

Define Measures & Data Sources

measure definition

name	Family Participation Rate
description	Percentage of program participants in learning intervention programs who had at least one family member participating in Family Literacy Nights, Motherhead Activities and Home Literacy Programs
intent	To measure engagement by our students' families. This is a family/community Engagement measure.

calculation	<i>formula:</i>	[# of students whose family member participated in given literacy programming event / # of students in program(s) served by event]
	<i>frequency:</i>	monthly

<i>scope:</i>	# of students whose family member participated in literacy programming event relates to Family Literacy Nights, Motherhead Activities and Home Literacy Programs # of students in program(s) served by event relates to program enrolment across Powerful Schools
---------------	--

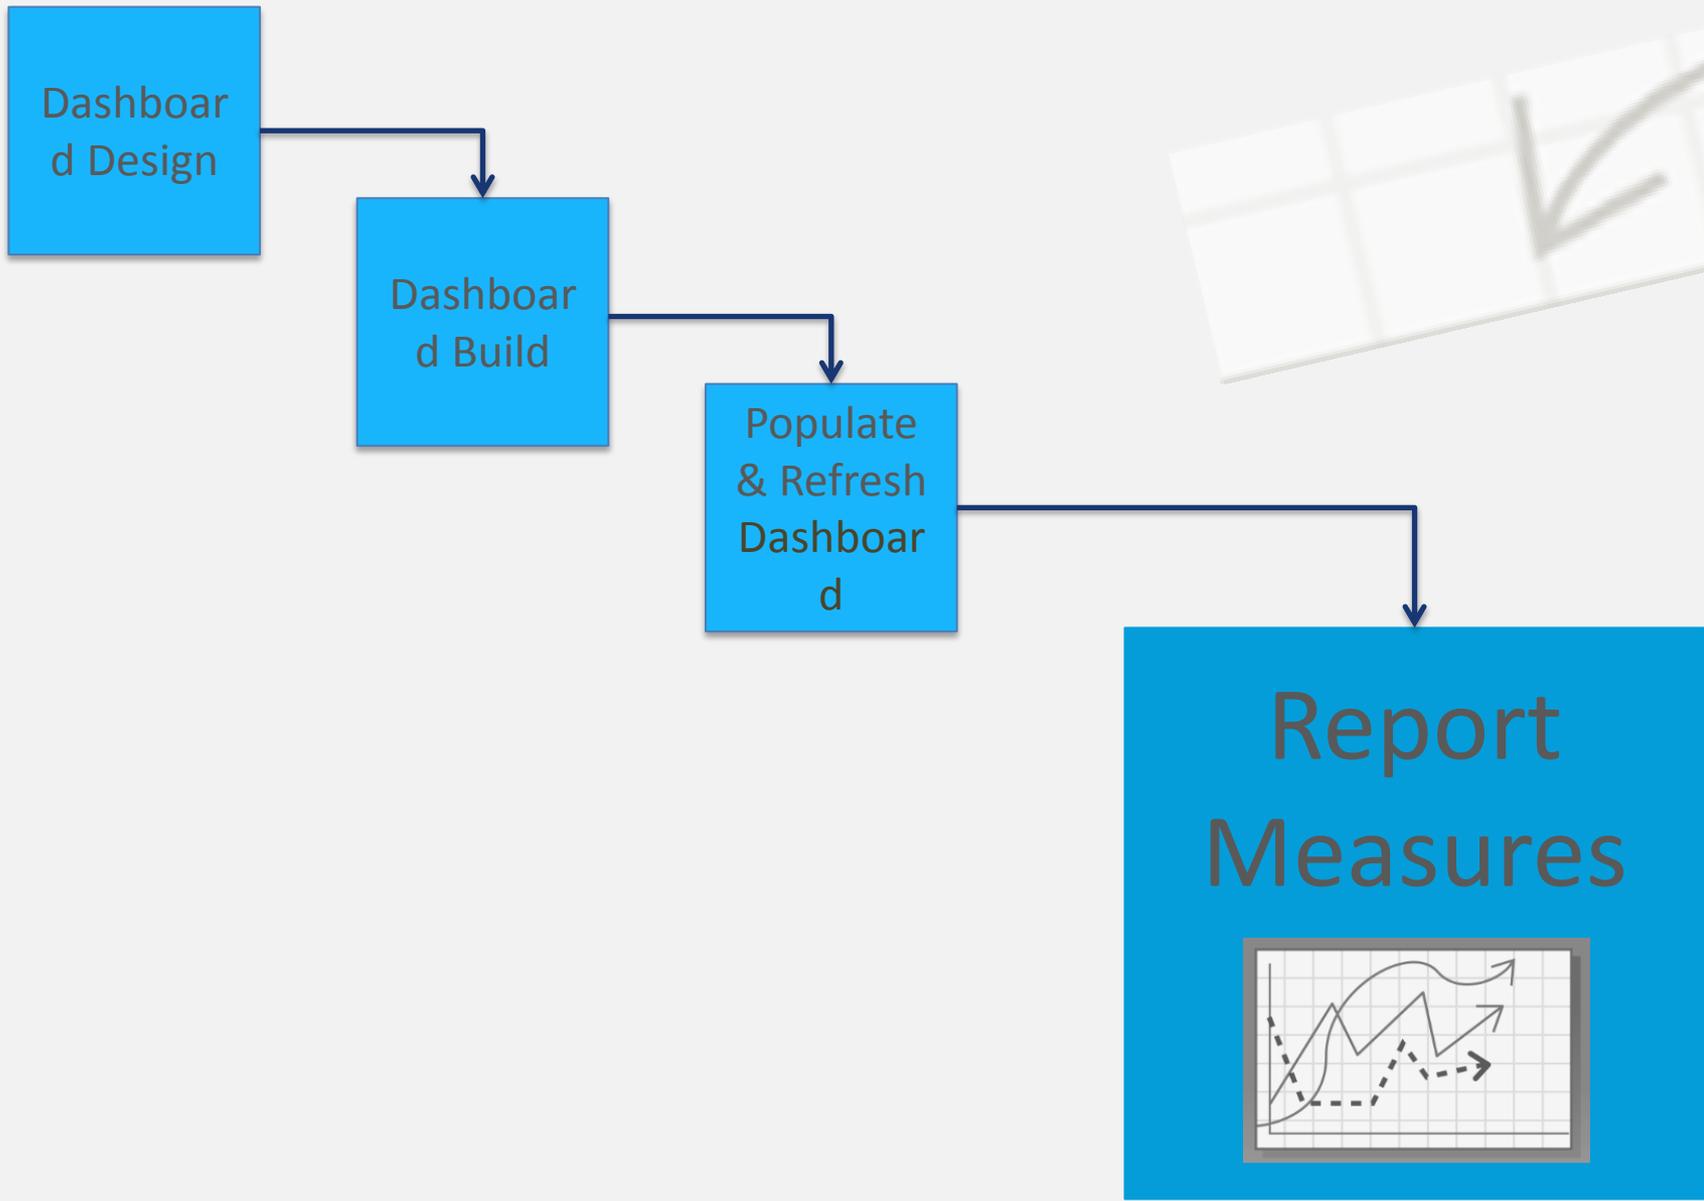

<i>data items:</i>	<i>data item name</i>	<i>description</i>	<i>source/availability</i>
	Num_familymember_participate	Number of PS participatns who had family member participate in literacy programs	Manual query from event(s) participant sign up sheet/survey
	Num_students_served	Number of students served by given event(s)	Manual query from program enrolment data

<u>presentation</u>	<i>comparison type:</i>	Trend over time
	<i>presentation method:</i>	Dashboard
	<i>frequency:</i>	Quarterly

<u>response</u>	<p>Establish acceptable range of Parent/Guardian Attendance Rate</p> <p>If performance falls below acceptable range, identify causes and initiate an improvement project</p>	
------------------------	--	--

<u>owner(s)</u>	<i>performance owner(s)</i>	
	<i>data owner(s)</i>	

<u>notes</u>	<p>For aggregation per time period calculate the total number of students served across all programs and the total number of students who had a family member attending all those programs to get percentage rate. (Don't average participation rate across programs).</p>
---------------------	--

Analysis of College GPA by Hometown

Most students come from Columbia and its suburbs.

Dashboard Review

- Can you evaluate what is going on?
- Is it easy to spot the areas that need attention?
- Does it provide context?
- Does the organization of the data make sense?
- How does the dashboard support better monitoring and decision making?

1: Dashboards cost money

Design-build-populate cost range: \$5-\$50K

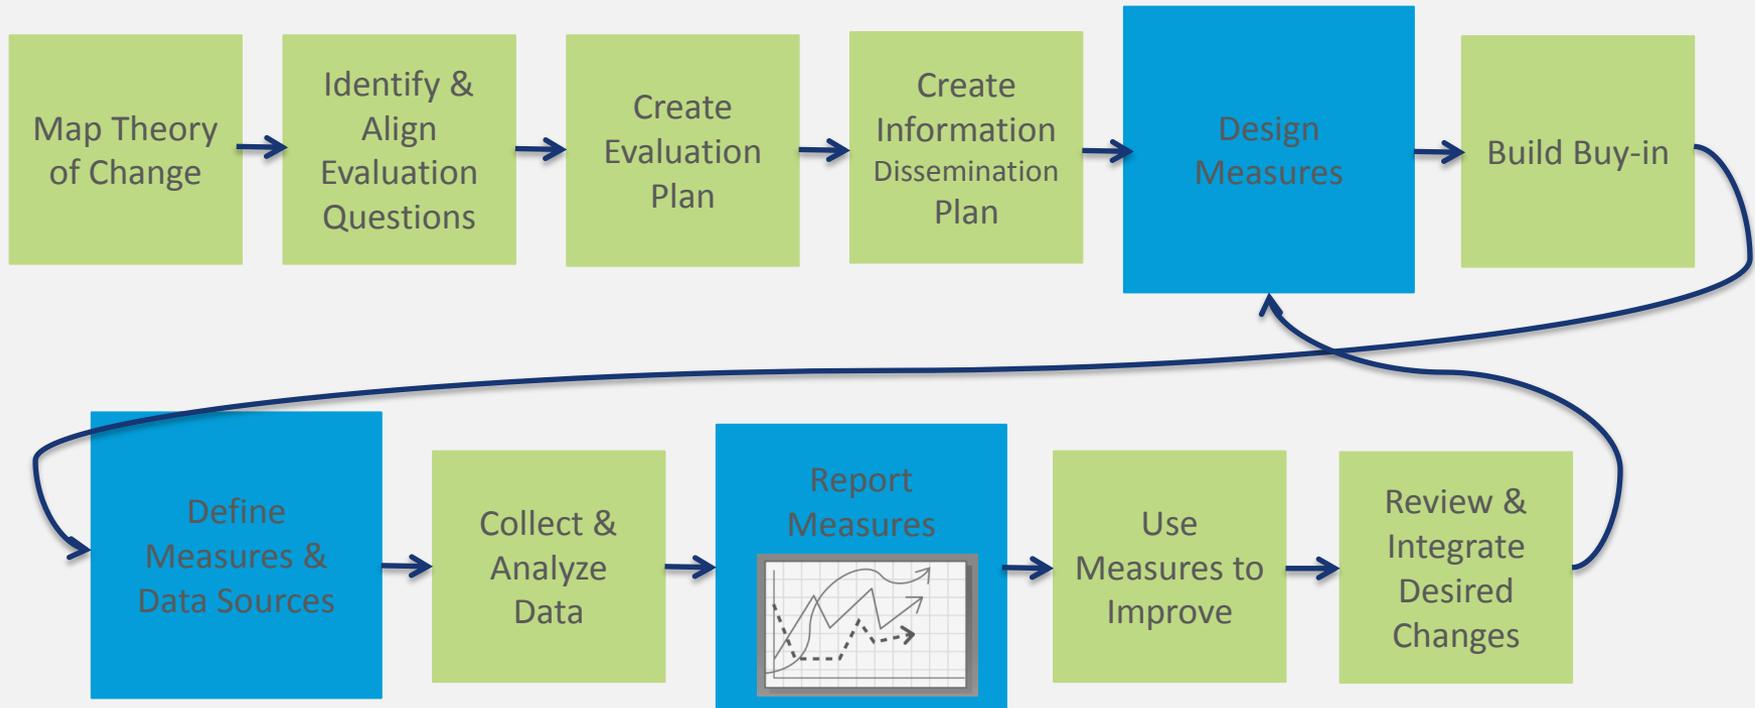

Example 1

Excel/tableau dashboard design-build-populate + refresh protocol + half-day training = \$8-\$10K
(includes 10 hrs measure design & definition consult)

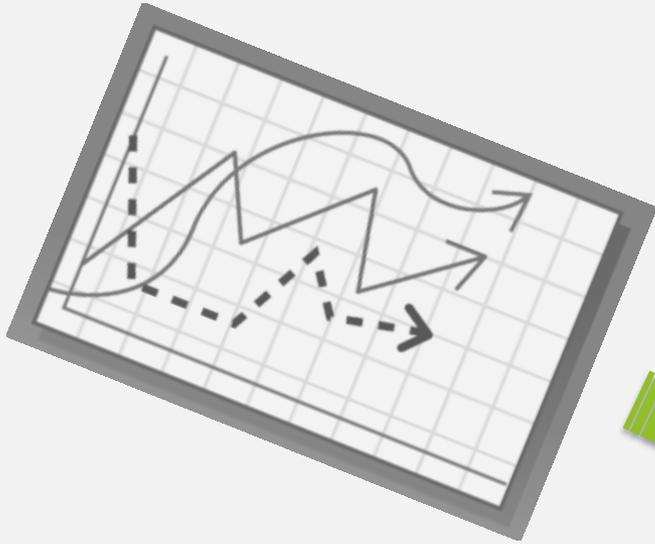

Example 2

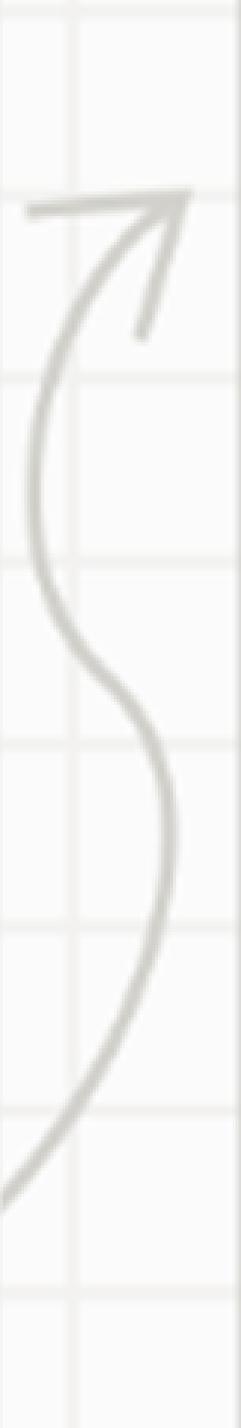

Dashboard design-build + database backend = \$30-\$50K (consider IBM Cognos)

3: Dashboards are part of a multiple-phase continuous improvement process

4: Dashboards can be a valuable tool in your evaluation & monitoring kit
