

# ILLUMINATE COMMUNITY VOICES

## Cultural Humility in the Evaluation Life Cycle

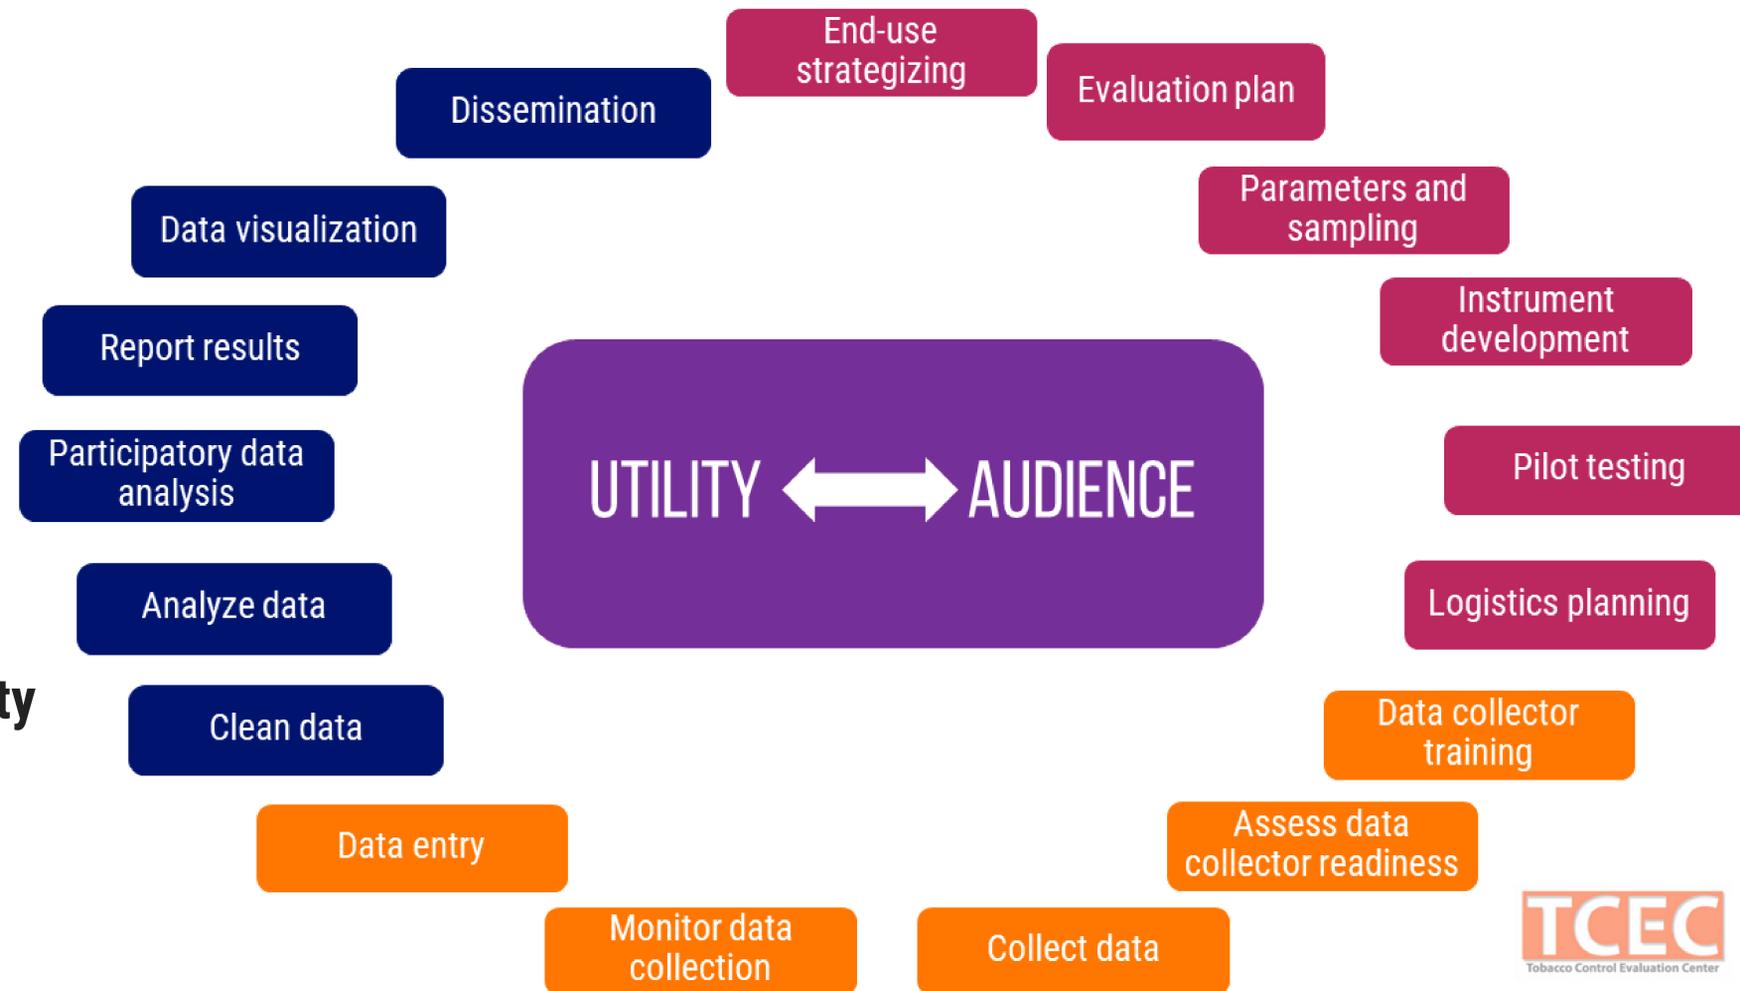

By Sarah Helleesen

### Background

TCEC's Evaluation Life Cycle organizes the evaluation process into three broad categories: **Planning, Data Collection, and Reporting & Analysis.**

Informing each step of an evaluation is its **utility and audience.**

Evaluators must ask, **what is the activity being used for, and who is it affecting?**

Cultural humility necessitates the inclusion of cultural considerations throughout the process of evaluation planning, data collection, analysis, and reporting results to stakeholders.

### Recommendations

In order to achieve greater health equity for all diverse populations, **validity and equity in the data** is of critical importance.

Evaluators can **benefit from including more voices** of the community in evaluation.

This could take the form of **participatory data analysis, pilot testing audiences** so they have a chance to provide **feedback on instruments**, and more.
